

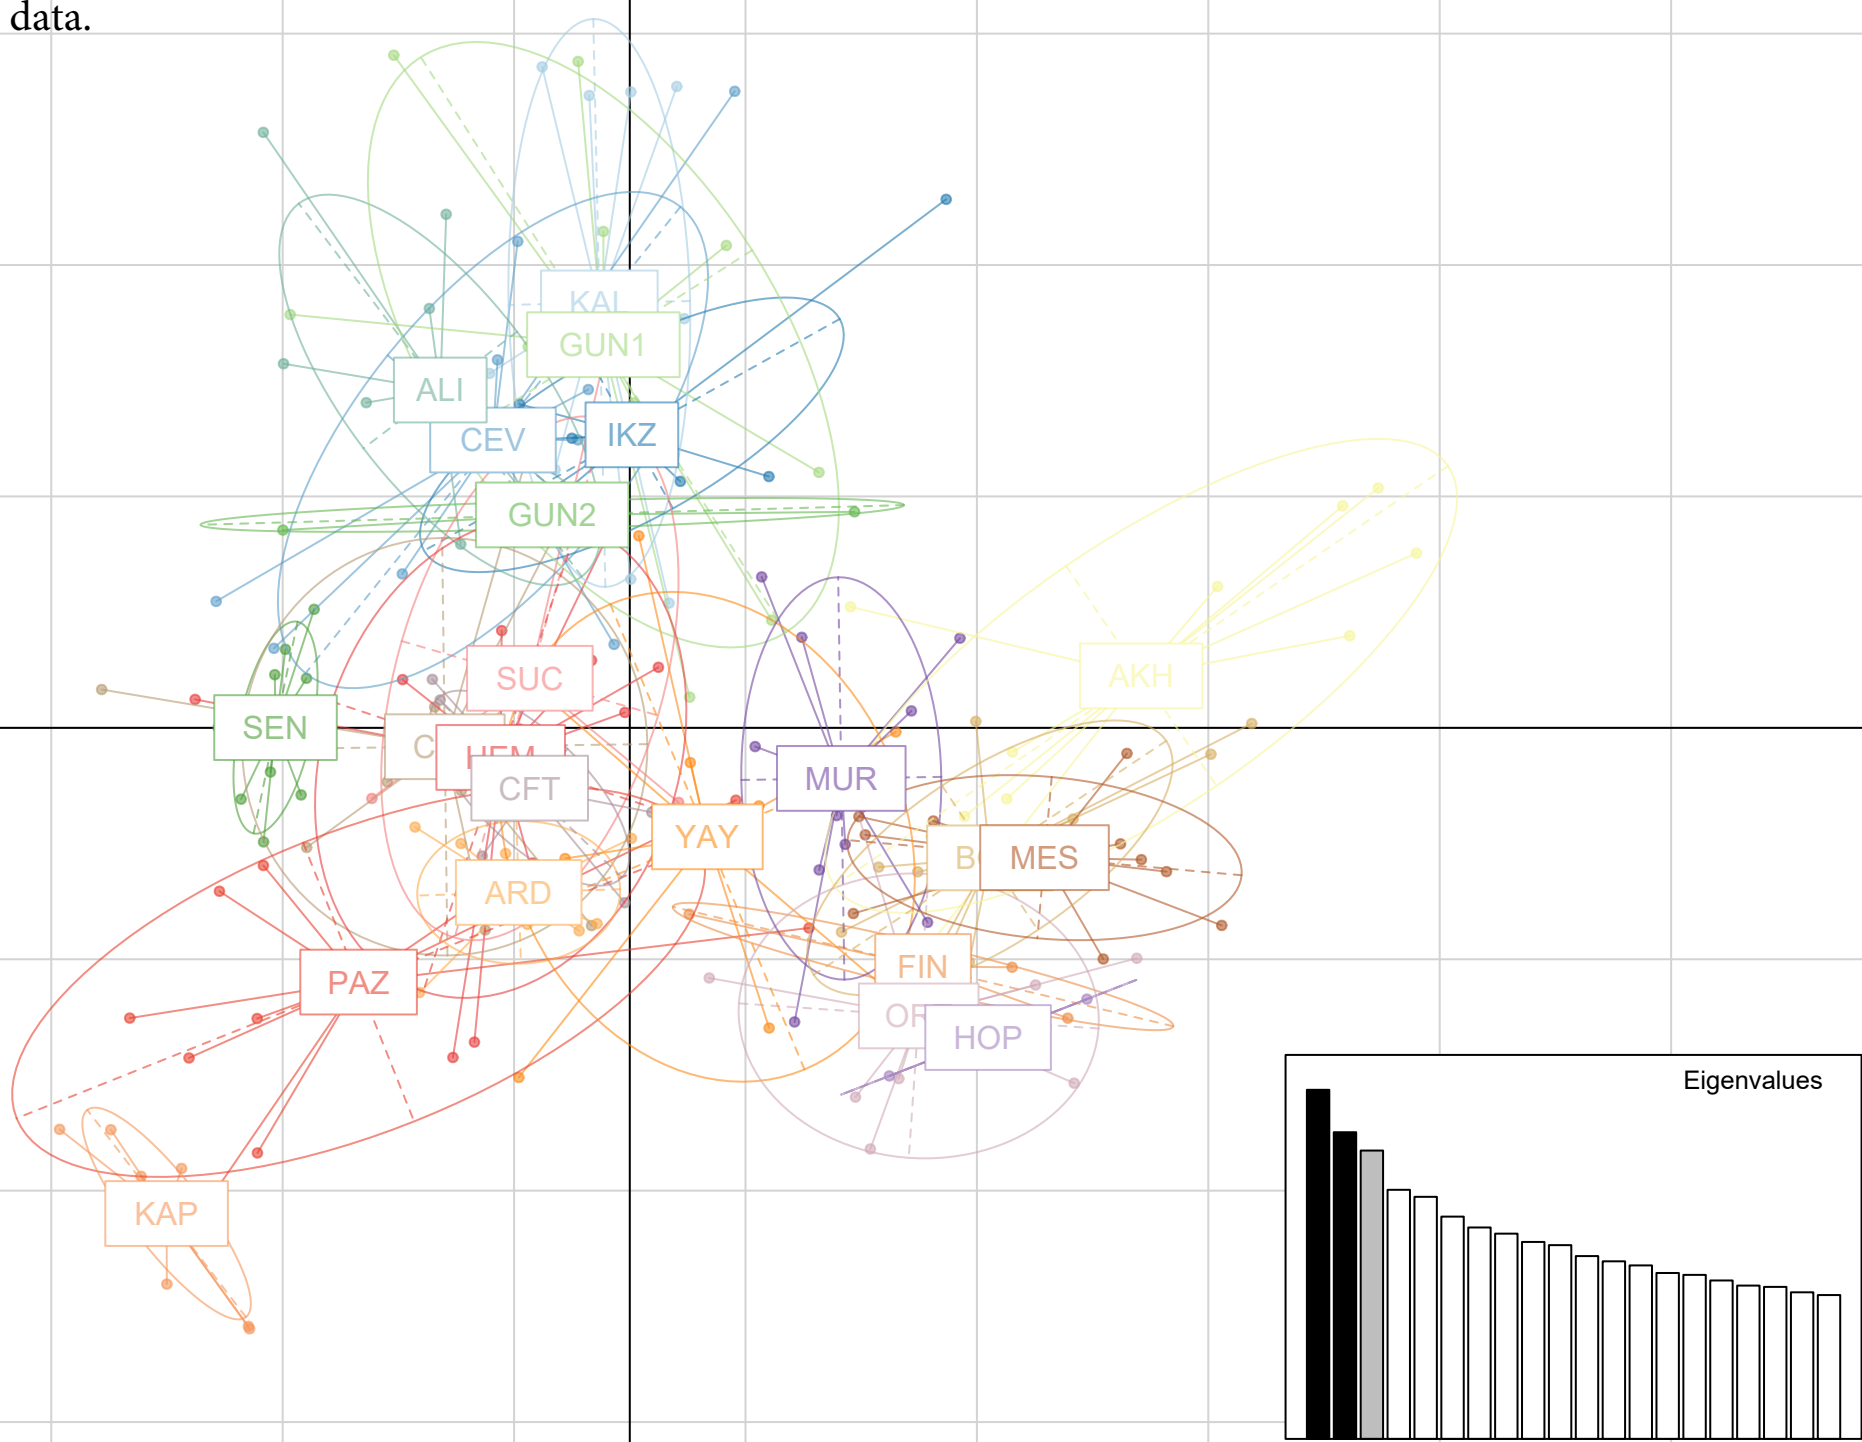

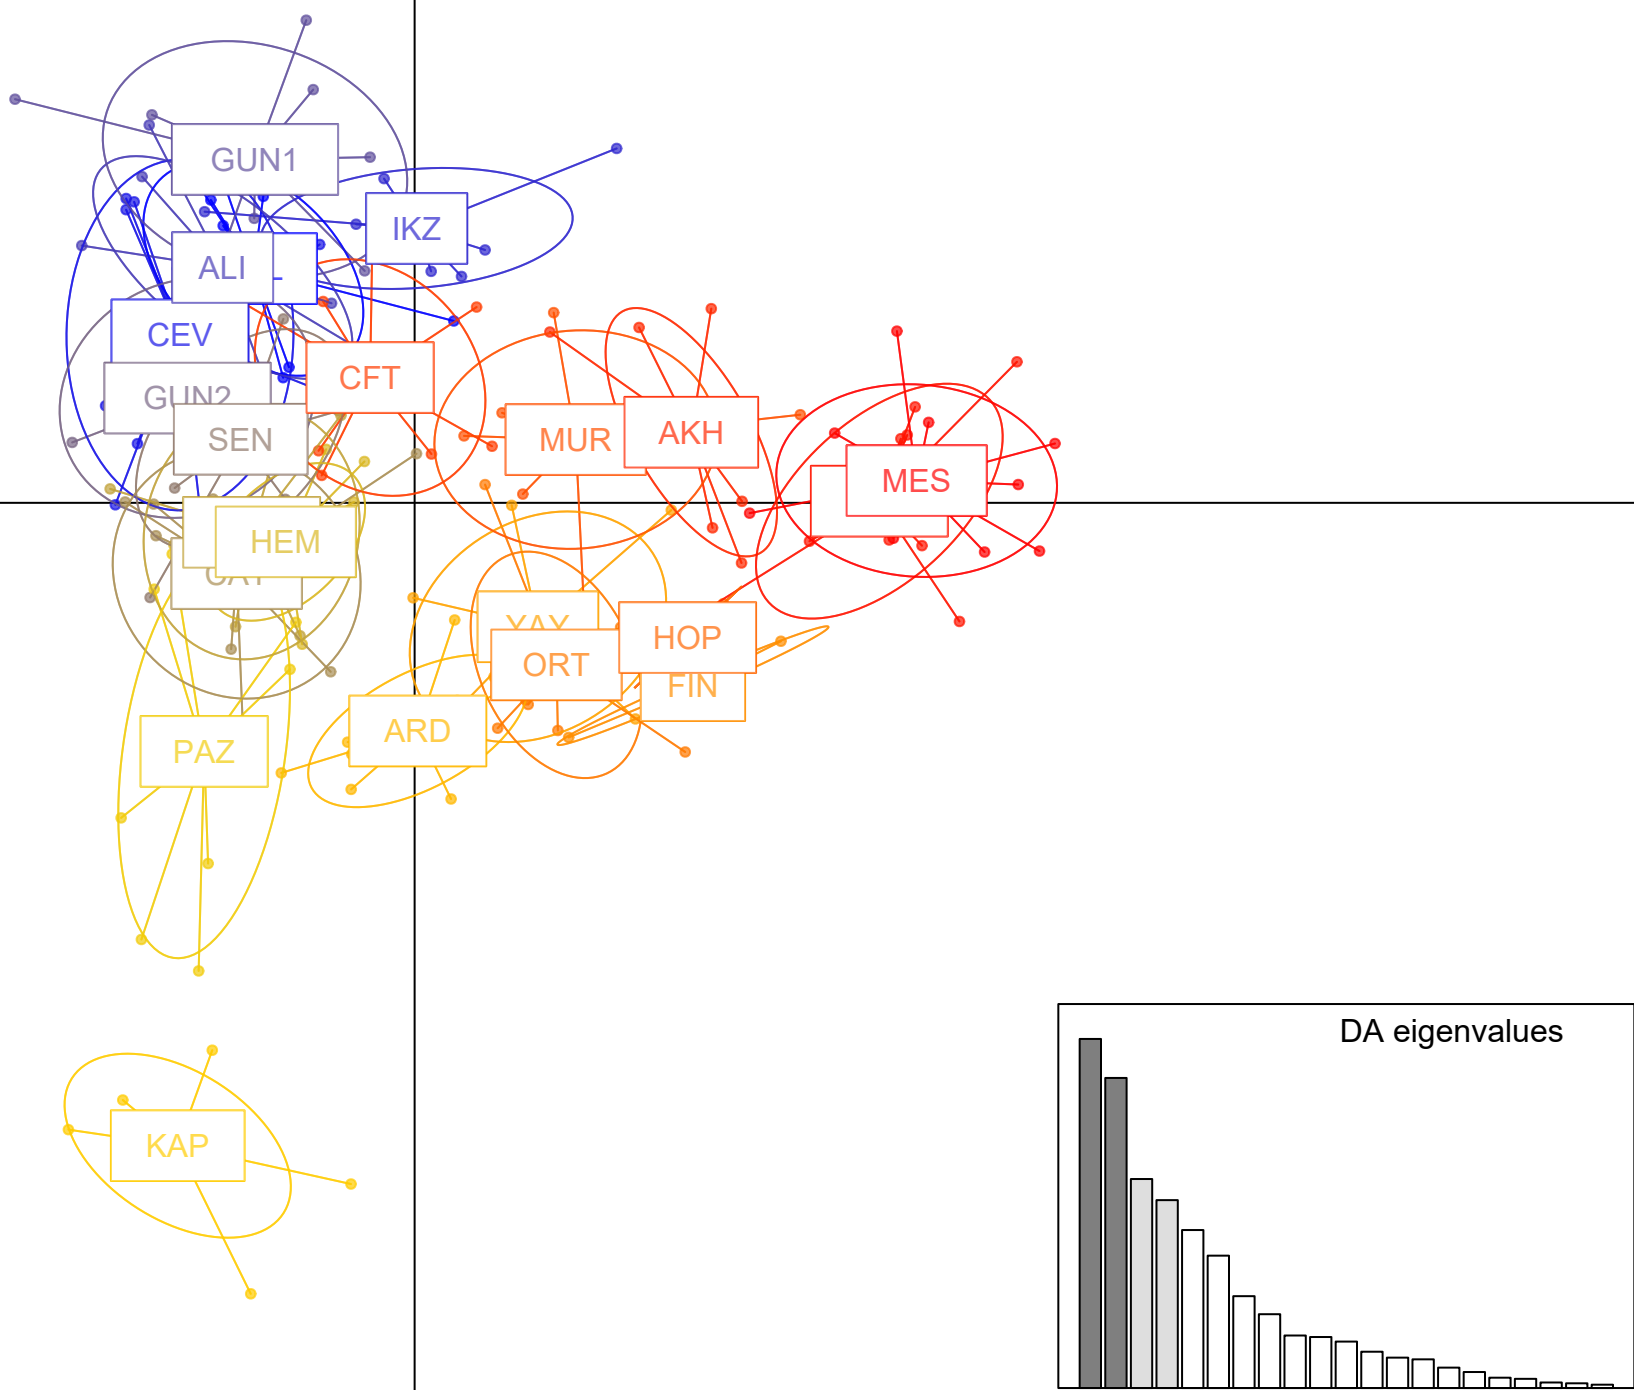

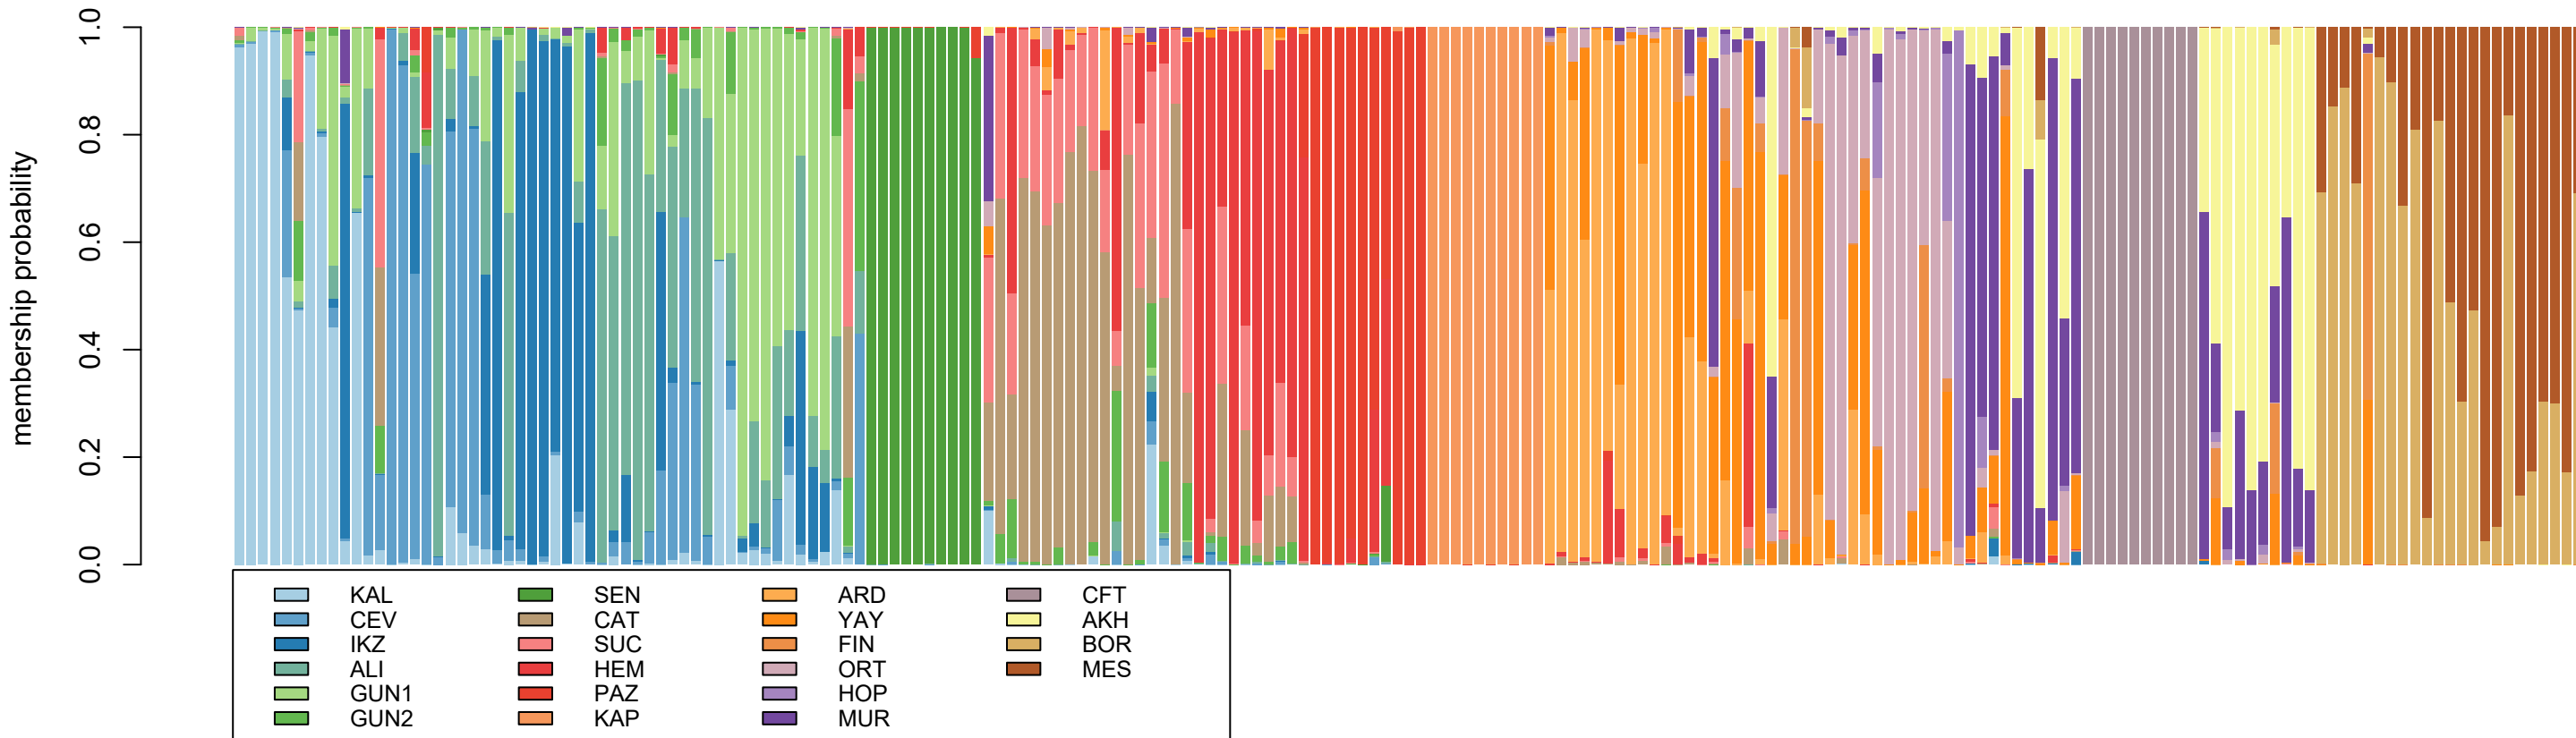

**Figure S1.** PCA scatterplot of populations based on microsatellite data. d

**Figure S2.** Discriminant scatterplots of all populations based on microsatellite data.

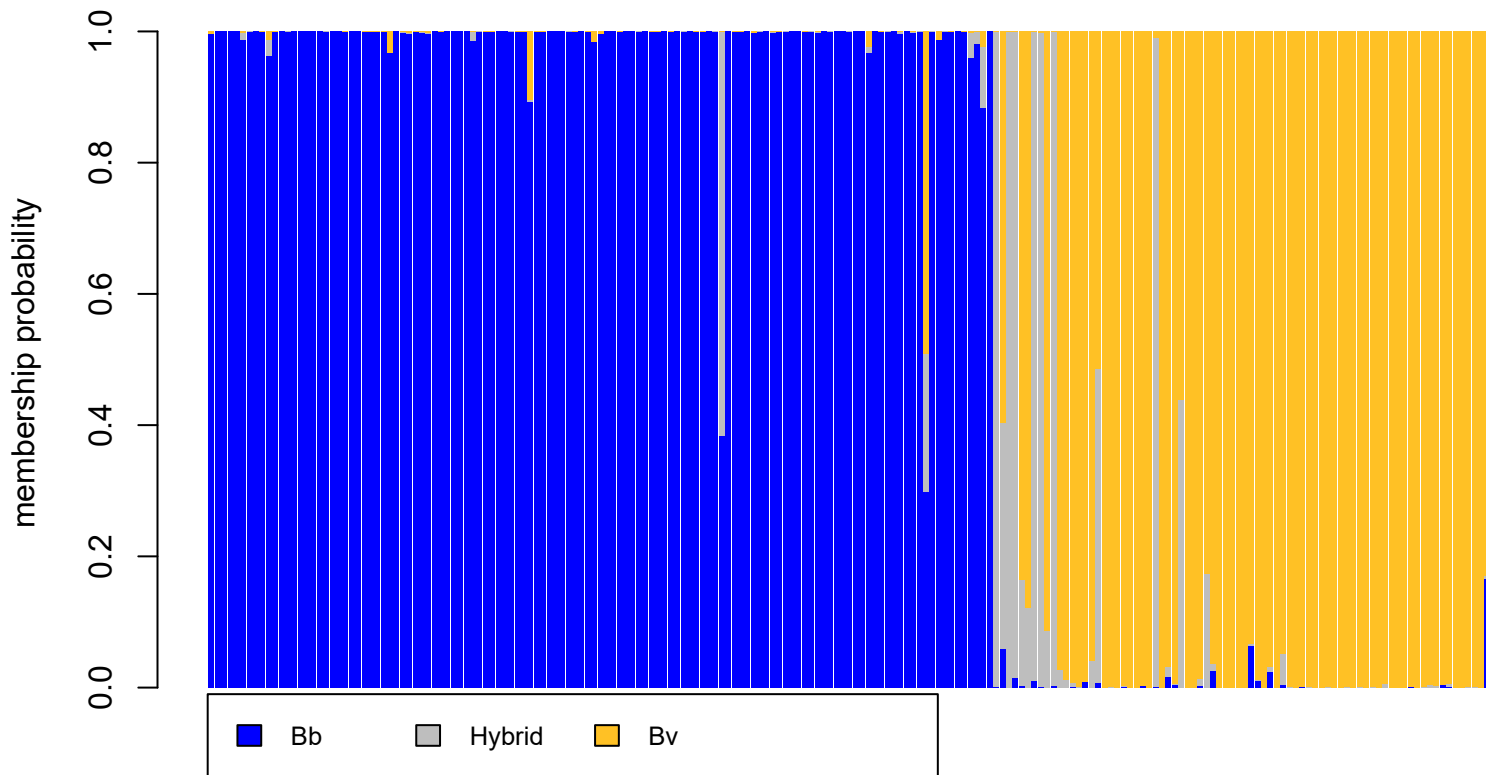

**Figure S3.** Individual membership probabilities to each population based on retained discriminant functions.

**Figure S5.** Individual membership probabilities to defined STRUCTURE groups based on retained discriminant functions.

**Figure S6.** Assignment plot from discriminant analysis of principal components (DAPC). Individuals are reassigned to these pre-defined groups (STRUCTURE analysis) based on the DAPC model with 40 principal components. The color gradient varies from red (1) to white (0), representing membership probabilities to appointed populations.
